Career Objective

Full-Stack Developer specializing in Laravel and React building scalable ERP/EHR platforms. Proven track record optimizing application performance, reducing technical debt, and mentoring newly hired developers. I am seeking a position where I can apply my skills and knowledge while contributing to the company's goals, mission, and vision.

TECHNICAL SKILLS

Core Technologies

- Languages: PHP, JavaScript (ES6+), TypeScript, HTML5, CSS3, SQL
- Frameworks: Laravel 9-12, React 19, Livewire 2, Next.js 15
- Database: MySQL, MSSQL (SQL Server), PostgreSQL

Healthcare Systems

- HL7 v2 messaging (MSH, PID, PV1, OBR, OBX, ORM, ACK), LIS/RIS integration
- Clinical audit trails, EHR / HIS / PHM domain

Frontend Development

- React: Hooks, Custom Hooks, Scope Context, Context API, Redux, Zustand
- Styling: TailwindCSS, Bootstrap 5, Responsive Design
- Data Visualization: Chart.js (dashboards, analytics, financial reports)
- Performance: Code-splitting, Lazy Loading, Memoization

Backend Development

- Laravel: Eloquent ORM, repository pattern, service layer, FormRequest validation, queue jobs, schedulers, migrations, middleware
- APIs: RESTful architecture, OAuth2 (Passport), Sanctum (SPA authentication)
- Authentication: Role-based access control, JWT, Session management
- Database: Query optimization, Indexing, Eager loading, N+1 elimination

Deployment & Tools

- CI/CD: GitHub Actions, Docker, PowerShell automation, multi-environment deployment
- Platforms: Vercel, Netlify, Git-based deployment, cPanel
- Version Control: Git (workflows, code reviews, branching)
- Build Tools: Vite, Webpack, npm, Composer

EXPERIENCE

One Document Corporation

Nov 2023 - Present

Supervisor Developer (Feb 2026 - Present)

- Lead developer on the EHR Clinical Documentation platform (Laravel 12, React 19): authored the repository and service architecture.
- Led a platform-wide refactor migrating authentication, form-locking, and utilities endpoints from controller-embedded queries to a layered

request/service/repository architecture — reducing the form-lock controller from 525 to 83 lines across 48 files.

- Designed a TTL-based form-locking system with heartbeat renewal and automatic stale-lock expiry, preventing concurrent edits to the same clinical document across users and sessions.
- Sole owner of CI/CD and release engineering — GitHub Actions pipelines and PowerShell environment provisioning for test and production deployments.
- Built the clinical-record audit-trail service supporting access traceability.
- Review and merge team contributions; maintain backend coding standards and onboard new developers.

Full-Stack Developer (Laravel / React) (Nov 2023 - Feb 2026)

- Built HL7 v2 laboratory and radiology (LIS/RIS) integration connecting the hospital system to third-party diagnostic providers — message construction, parsing, and acknowledgement across MSH, PID, PV1, OBR, OBX, ORM, and ACK segments.
- Reviewed and merged 180+ pull requests from a 15-developer team across the hospital information system, maintaining integration quality ahead of releases.
- Designed package order processing to batch item, tax-rate, and physician lookups into keyed collections joined in memory — a fixed 3 queries per package regardless of item count, avoiding per-item N+1 lookups.
- Sole author of the cash/POS module on the population health platform (repository, service, validation, and controller layers), including conditional relation loading that hydrates only the payment relations a transaction's type requires.
- Delivered CPOE request handling, radiology result views, surgery module, and patient portal API for the hospital information system.

Stack: Laravel 9–12, PHP 8.0–8.3, React 19, Livewire 2, Redux Toolkit, TanStack Query, Vite, TailwindCSS, MySQL, MSSQL, PostgreSQL, GitHub Actions, HL7 v2

Freelancing

Web Developer (Sept 2022 - Nov 2023)

- Delivered 7 production systems for government offices, engineering firms, and school premises, specializing in custom document management, scheduling, and workflow automation solutions.
- Built Schedule Tracker organization, eliminating manual scheduling coordination through automated email reminders and real-time calendar system
- Developed E-ProjectDocs engineering repository centralizing technical files with controlled access and project lifecycle management
- Created Document Management System and Location Clearance with automated reporting that improved data accuracy and accountability.
- Delivered Digital Newspaper Archive preserving historical editions with on premises access.

Stack: Laravel, React, PHP, MySQL, Bootstrap, TailwindCSS, JavaScript (ES6+), TypeScript, OAuth2, Laravel Sanctum

Education

Bachelor of Science in Computer Engineering
Southern Luzon State University (SLSU)
Graduated: 2023 | Cum Laude
